# Trie

## Properties

- ▶ <Retrieval (but can be pronounce as either *tree* or *try*)

# Trie

## Properties

- ▶ <Retrieval (but can be pronounce as either *tree* or *try*)
- ▶ Store a set of words (with or without associated values)

# Trie

## Properties

- ▶ <Retrieval (but can be pronounce as either *tree* or *try*)
- ▶ Store a set of words (with or without associated values)
- ▶ insert/retrieve in  $O(S)$ , with  $S$  the length of the string

# Trie

## Properties

- ▶  $\leq$  Retrieval (but can be pronounce as either *tree* or *try*)
- ▶ Store a set of words (with or without associated values)
- ▶ insert/retrieve in  $O(S)$ , with  $S$  the length of the string
- ▶ Allows for non-exact matches ( $\leq$  set/map)

# Trie

## Structure

- ▶ Tree structure

# Trie

## Structure

- ▶ Tree structure
- ▶ Stores the *path* for the string instead of the string

# Trie

## Structure

- ▶ Tree structure
- ▶ Stores the *path* for the string instead of the string
